2 more questions ;)

About the weather script.

1. where do you store the img files ? i will like to changes some of them
  2. is it possible to changes the code, so i get the next 4/5 days insted of only 2 ?

1. They are inside the addon. It's a zip file so you can just uncompress it.
  2. I think the weather feed returns the forecast just for two days. If you know how to edit lua scripts and a better weather feed the addon can be improved (you can find the script also from the addon zip).
