
Sync issues with Google Calendar

Posted by Cthulhux - 2013/06/04 17:08

I'm using the latest and greatest B) Rainlendar2 beta on Win64 (Win7 and Win8) and an Android smartphone. Some of my events appear in both Rainlendars but not on the smartphone.

One of the missing events is a recurring task (every two weeks), one is a one-time task. Are there any known problems with this constellation?

I found the issue. Seems like the official Calendar app has sync issues. Replaced it by Business Calendar and everything is fine. Sorry for any caused confusion!
