Googel Error

Posted by Beat - 2013/06/13 06:47

_____

I'm usiung Railendaer Pro 2.11.1.(b129) (XPH-SP3). I cannot understand the following warning from Railendar:
 http://www.rainlendar.net/cms/images/fbfiles/images/ErrorMsg_Conflict.jpg
"Google Error ()!
 The event cannot be uploaded to the Google calendar due to a conflict. The updated event will be reloaded from the Goggle calendar."

Unclear for me is:

Which event is meant and what conlict?

How can I find out?

Thanks
Beat

_____

A conflict means that the same event has been edited in Google's website between the time it was read by Rainlendar and edited in it. If you get this error repeatedly you need to refresh Rainlendar so that it will download the latest copy of the event from Google's server.

_____

Thank you! I understand that after a refresh everything is sync'd again.
