
Rainlendar2 Pro on SLED 11SP2?

Posted by BeaglePapa61 - 2013/06/13 10:26

Hello,

please help me to install Rainlendar2 on a SLED 11SP2 (if it is possible).

Thanx, Michael.

Sure. Can you tell what happened when you tried to install the calendar?

You should start by downloading the *.tar.bz2 version of Rainlendar and uncompressing the files to some folder. Then just try to run rainlendar2 from the folder. If that doesn't work you can try to run the application from the terminal with "--debug" command line argument to enable the debugging. You can then check from the debug log for possible errors.

If Rainlendar doesn't start it usually means that you don't have some 3rd party library installed or you have too old version of it. In most non-Ubuntu systems especially the required openssl library version is quite often older than what Rainlendar expects.

Here are the messages after

"/rainlendar2 --debug" in terminal:

```
./rainlendar2 --debug
./rainlendar2: /usr/lib64/liblber-2.4.so.2: no version information available (required by ./rainlendar2)
./rainlendar2: /lib64/libcrypto.so.1.0.0: no version information available (required by ./rainlendar2)
./rainlendar2: /usr/lib64/libidn.so.11: no version information available (required by ./rainlendar2)
./rainlendar2: /lib64/libssl.so.1.0.0: no version information available (required by ./rainlendar2)
./rainlendar2: /lib64/libssl.so.1.0.0: no version information available (required by ./rainlendar2)
./rainlendar2: /usr/lib64/libldap_r-2.4.so.2: no version information available (required by ./rainlendar2)
./rainlendar2: /lib64/libc.so.6: version `GLIBC_2.15' not found (required by ./rainlendar2)
./rainlendar2: /lib64/libc.so.6: version `GLIBC_2.14' not found (required by ./rainlendar2)
```

Your libc seems to be too old. It might be quite tricky to update that since it is used basically every application in your system so you probably just have to wait until SLED upgrades the library. In the mean time you can try one of the older versions and see if they work.
