## Larger clear easier to read fonts for Google Event

Posted by GrouchyGaijin - 2013/06/13 18:02

---

Hi Guys,

I'm on Ubuntu Linux 12.04 and would like to make the fonts larger in the events' list, todo list and calendar month view.

I tried adjusting the font size (scale?) from 100 to a higher number, but when I get the fonts large enough to read easily, they are blurry.

So now, I'm stuck between either having a cool looking desktop and squinting or an easy to read desktop that looks BAD - LOL.

Any ideas? (It sucks getting old) :ohmy:

The "Scale" value scales the whole window like an image so the texts will get blurry. If you just want your text bigger you can change that in Options->Advanced->"Font scale".
