## change font for events

Posted by galdino - 2013/06/21 08:12

---

(Translation from Italian)

I need to change the font for only the highlighted text in the image because it looks very male. Mi can help step by step how to do it? Do as if you were to explain to a child. If you have been treated, or is in the guide, help me to find the topic. Thank you. <http://www.rainlendar.net/cms/images/fbfiles/images/event-f7db0484a374fb5efc1623c959f24986.JPG>

The easiest way to improve the readability is to increase the font size. You can do that from Options->Advanced->"Font Scale". It's also possible to change the font but you would have to edit the skin yourself. There are instructions in Rainlendar's help how to uncompress the skin and how to edit it.

I found it for myself.

If you have a .r2skin skin then open it to the xml folder. Elements.xml Find fonts. They are defined there.
