## yahooweather skin

Posted by cellist.phil - 2013/06/22 13:05

---

Where can I download the yahooweather skin? What version of rainlendar do I need for that skin?

TIA,  
Phil

An independent skin :

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&id=17902&catid=6#17902](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&id=17902&catid=6#17902)

Be included in addon for Shadow4 (for ver 1.10) :

<http://www.rainlendar.net/download/Shadow4-Widgets.r2skin-addon>

Another independent skin :

<http://customize.org/rainlendar/skins/91083>

The one from customize.org display 5 days forecast, so I decided to try that one. It also provides additional info when you hover over the today icon.

I'm running rainlendar2.9 on one computer and r2.11 on another. It shows the 5-day forecast on both, but on 2.9 the hover functionality works but not on 2.11.

I'll try to contact the author.

The author gave the following explanation:

I am glad you like this skin.

Yes, I have tried it running on 2.11, and it is work on my pc.

Only this skin has the problem ? or the all skins ?

If you hover over an event in the Event List, can see a popup info ?

if not, this mean you had not enable(active) "tooltip", please enable it from Option >> Skins.

jhg, 2013/6/24

Thanks jhg!
