
Alarm and Calendar Improvements

Posted by bd4ever - 2013/06/24 06:24

It would be nice to have flashing Alarms for scheduled events on the Desktop and to be able to add color to the Alarms to differentiate them from the Savannah Calendar skin.

I would also be nice to be able to identify current day on the Savannah Calendar when an event is scheduled. Currently the default is the color of the Alarm which blends with all similar alarm colors. Perhaps a black frame around the date box would do the trick or something similar.

Implementation of the above suggestions would be appreciated!
