## sharing calendar with multiple computers

---

I have been using Rainlender for a while now on my desktop PC and I really like how it lays everything out for me.

I recently got a MacBook Pro laptop to be more portable and I'm wondering if there is a way to use the same calendar that is on my desktop, on my new laptop??

If you have the Pro version you can e.g. sync your events through Google Calendar so you can access the same events from both computers. With Lite version you can transfer the Default.ics file, which contains the events, between the computers.
