
HotKeys

Posted by Grantp - 2013/06/26 18:06

Hi,

At the moment I use HotKeys to hide & show windows

I.E. WIN + Delete to Hide Windows & WIN + Insert to Show Windows.

I am currently writing a RainMeter Skin and would like to be able to put a button on my desktop to do this for me. Is there a command line option I can execute from RainMeter to allow me to do this

I.E Something like this 'RainLender /Show' or 'RainLender /Hide'

Or is there some other way or no way of doing this

Many Thanks

Grant

If I understand you, the command line you're looking for is:

```
rainlendar2.exe -e/--execute Hotkey_Hide_Windows/Hotkey_Show_Windows
```

Hi,

Thanks for your reply, by the looks of your answer you do understand what I'm trying to do, but it doesn't seem to be working. Below is the code I am using the first line works its the code to launch/run Rainlendar the second & Third is the show & hide

This works

```
LeftMouseUpAction=!Execute
```

This doesn't

```
LeftMouseUpAction=!Execute
```

```
LeftMouseUpAction=!Execute
```

Any ideas?

Is there a list of command line options anywhere that I could look at?

use -e or --execute, not both at the same time. (see <http://superuser.com/a/372261>)

The command line options are in the Help File -> User Guide -> Options -> Command Line Arguments (the last section)

Jorge_Luis, thanks again for your reply. I am begining to feel stupid here as again nothing works. I am running Rainlender Pro 2.11 on Windows 7 if that makes any differance.

This is the line from RainMeter I am trying to run

```
LeftMouseUpAction=!Execute
```

```
LeftMouseUpAction=!Execute
```

Do I need to create a LUA script called Hotkey_Show_Windows & Hotkey_Hide_Windows ?
If so I have no experience with LUA so no idea how to do this.

Thanks Grant

The functions are already created. They come with Rainlendar2.
After trying it by myself, first I think that the -e option wasn't working. Then, after going back until build 70... I "see" what I've been missing.

SOLUTION. You need to use:

```
LeftMouseUpAction=!Execute
```

Still nothing happens. This is my code and nothing

```
Meter=Button  
ButtonImage=32.png  
H=23  
W=5  
x=1184  
y=225  
LeftMouseUpAction=!Execute
```

What am I doing wrong?

I have sorted it the command needed was

```
LeftMouseUpAction="C:\Program Files (x86)\Rainlendar2\rainlendar2.exe" --execute Hotkey_Hide_Windows()
```

```
LeftMouseUpAction="C:\Program Files (x86)\Rainlendar2\rainlendar2.exe" --execute Hotkey_Show_Windows()
```

Thanks for your help Jorge_Luis you pointed me in the right direction
