## Rainlendar 2.12 BETA build 132

Posted by Rainy - 2013/07/01 05:10

---

Build 132 can be downloaded from here:

Windows (32-bit): Rainlendar-2.12.b132-32bit.zip  
Windows (64-bit): Rainlendar-2.12.b132-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.12.b132-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.12.b132-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.12.b132-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.12.b132-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.12.b132.dmg

MD5SUMS-b132

Translation file: rainlendar2.pot

This is beta version! It has not been tested.

I'm still waiting for more quota for the the new Google calendar plugin (v3) so it might stop working after a while. But I'd be interested in knowing if it returns the error 500 for the recurring events like the old version.

Changes:

- o Disabled RTL layout on controls which do not support it properly.
- o The task and event lists can show a text when they are empty.
- o Added today window which is shown on startup and when the day changes.
- o Google Tasks uses now OAuth for added security (i.e. Rainlendar does not store your Google password anymore).
- o New Google calendar plugin which uses the v3 API.
- o Added color to category mapping functionality to the new Google calendar plugin.
- o The sort button was not updated when switching between tasks and events in the manager.
- o Added "useFTPS" setting for SSL FTP connections in Network Shared Calendar. No UI so the settings file needs to be edited manually. 1 = Try using SSL, proceed anyway otherwise. 2 = SSL for the control connection or fail. 3 = SSL for all communication or fail.
- o Deleting events from read-only calendar failed silently.
- o Deleting multiple items from Outlook only deleted the first one.

I localize most of the new strings. But there are a couple I can't find. Any clue?

- \* Colorless
  - \* Creates darker version of the windows.
  - \* Dark
  - \* MyMenuBar (new manager?)
  - \* Weather celcius
  - \* Weather woeid
-

Rainy wrote: o Added today window which is shown on startup and when the day changes. Thanks, I'm waiting for this feature for a long time.

But, I think, there has bugs. If I enable "Today show tasks", it shows the number of items will same with ToDo List show, instead of just today tasks and over due tasks.

For Jorge\_Luis:

- \* Colorless
- \* Creates darker version of the windows.

\* Dark  
These are for Chromophore skin.

\* MyMenuBar (new manager?)  
I also cannot find it. I think it maybe for Linux or Mac.

\* Weather celcius  
\* Weather woeid  
These are for YahooWeather window which be included in Shadow4-Widgets.r2skin-addon

Thanks anoob. Always forgot that Shadow4 isn't the only skin, only the default.  
I update the Spanish localization.

I been reading about the non-working GWeather, the YahooWeather..., but when the Widgets addon changed?

I have my doubts about the strings:

\* "Colorless": in Spanish could be translated as "incoloro" (without color). But in this case, it looks like more as Gray/Grey/White.

\* "Weather celcius", "Weather woeid", "Today show tasks": there is the string "Eventlist height", and I think in list as an object and not as the window, because they're the window's variables. But how can be translated "Today show tasks"? I remove the Today and translate "show tasks". And "Weather celcius"? I'm not sure if the window's name is redundant in these cases.

I'm not a linguist, but I would like to note something: the temperature scale is called Celsius (named after Anders Celsius, [http://en.wikipedia.org/wiki/Celsius\\_family](http://en.wikipedia.org/wiki/Celsius_family))

I can't find strings located below:

- \* End after
- \* occurrences (occurrences?)
- \* Toggle Today Window I find it
- \* Comma Separated Values

Lost Strings In Google Calendar (v3) Color mapping:

Purple  
Bold green  
Bold blue  
Gray  
Turquoise  
Bold red

and all categories strings

I encountered wxWidgets Debug Alert when start the Rainlendar, but I don't know how to reproduce it.

- \* MyMenuBar should not be a translatable text. I'll remove it from the POT.
- \* celcius -> celsius. Roger that :-).
- \* Some of the color names are missing from the translation file. I'll add them in the next build and fix the categories too.
- \* The "End after" and "occurences" (yes, it should be occurrences) are in the event and task editors' recurrence tab.
- \* "Comma Separated Values" is import and export format.

I'll try to hunt down those asserts. They probably happen somewhere if either the start or end date is missing from an event.

Hello,

I'm trying to connect google calendar v3. And i get error 404 unable to download calendars.

@lazarus, can you send me the Rainlendar's debug log when you get this error? You can use the support email address.

OK, I found the reason, I always forgot it, if tasks had not set start time, them will still display on ToDo-List (and Today-Window), even set "Hide upcoming", so suggest add an option, "ToDoListShowComingTasks=1", to Today-Window.

And I think maybe some people have the same wish with me, that when Today-Window is shown, can put it on the "Top"

---

of Desktop, so suggest add an option, "WindowPosition=0", to Today-Window. (or let user to select "Default" or "Top")

I've been thinking about how the tasks should be shown in the Today window but I'm not really sure if one wants to see all the tasks or just the ones that are due on that day. What I probably do is to add a new setting to the to do list that allows you to show/hide the tasks without due date so that the user can customize the list from the context menu/settings dialog (the settings would apply only to the Today window). I'll have to think about this some more...

The window position can be changed from the settings but for some reason it's only shown if the dialog is opened from the context menu. I'll fix that.
