
Weather stuck on \"Refreshing...\"

Posted by mikolajek - 2013/07/05 08:15

Hi,

I cannot make my weather module working - it has got stuck on "Refreshing..." and remains in that state for the whole time.

I've checked my RSS feed correctness but it works OK and my browser displays the data with no problem (<http://weather.msn.com/RSS.aspx?wealocations=wc:35813&weadegreetype=C>).

Shall I unblock anything in my firewall (Kaspersky)? However I've already granted Rainlendar "trusted" status and Kaspersyk doesn't seem to block anything here.

Can you please advise me what to check?

Which skin are you using ? Is the default (Shadow4) or other ?

The skin's version ? (eg: Shadow4 1.10)

The weather widget is from where to download ? (The widget's version)

If you using a old skin or widget, it may happen this issue.

I use Statica EN HUD Edit skin, downloaded from here: <http://customize.org/rainlendar/skins/63524>. It's 1.2 version.

I run Rainlendar latest build. Unfortunately none of the build-in skins has a weather module so I could test it with an original skin.

It's a old skin, and some people had ask.

Please see :

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&id=17480&catid=4#17480

download the file : StaticaEN_HUD_Edit_1_2_weather.zip

and install it.

Wow, it's worked as a charm! Thank you very much for your assistance!

Indeed it's a quite old skin, but unfortunately not many skins have been produced lately... Well, at least not too many of those I enjoy ;)
