## TO-DO list - \"Number of days the list shows\"

Posted by Don Ptah - 2013/07/07 16:41

---

The option does not work - it seems there is no corresponding line in the rainlendar2.ini. Consequently, the TO-DO list always displays to-do items from ALL days.

The line you're looking for is: `ToDoListShowComingTasks` (remember that 0 shows all)

Mmm, ok. What about past days then? I had thought this setting to affect both past and future TO-DOs, but it actually affects the future ones only.

I guess it becomes a feature request then. One of the two would be helpful:

- 1) allow to hide past and future TO-DOs separately (as is already possible with events)
- 2) allow to hide completed tasks from the TO-DO list without automatically hiding them in the calendar (schedule) views.

What I want to achieve is tracking all the events and to-dos in day, week and month views, while only seeing current TO-DO items in their respective list window.

It should be possible to hide the completed task only from the list but keep them still in the calendar. To do this you need to edit the rainlendar2.ini file manually and add the line `ToDoListHideCompleted=1` under the `ToDoList` section. That way the setting only affects the "Todo list" window.

Thanks, Rainy! Your solution works, but one needs to shut Rainlendar completely before editing rainlendar.ini, not just refresh the app as usual. It would be great if you could add this as a normal option, so that completed tasks could be shown and hidden again in the to-do list - without having to perform this tedious shutdown-edit-relaunch procedure.

I had been excited about such an easy solution, but it doesn't work. I also tried adding the `ToDoListHideCompleted=0` line under `ToDoList`. This also didn't work, but I suppose that's where an additional line might belong, if there can be one now. Could you please tell me the correct syntax?
