
No tray icon in Linux Mint 15 Olivia

Posted by ezkomomo - 2013/07/13 07:18

As I remember from Windows OS of Rainlendar, there should be a tray icon of the application. Doesn't this apply to the Linux version or is there a bug? I'm asking, because I haven't got a tray icon or it is invisible. Although in my Rainlendar settings (Options > General) I have got checked: Show tray icon

I installed Rainlendar without any problems.

I'm using:

Linux Mint 15 "Olivia" with Cinnamon 1.8.8

Rainlendar 2.11.1

Try disabling Options->Advanced->"Show app indicator icon" if you are not using Unity.
