## Moving tasks is very, very slow in Linux Mint 15

Posted by ezkomomo - 2013/07/13 13:55

---

Moving a task / to-do via drag & drop to another position takes about 20-30 seconds. I have got about 80 tasks on the task list window.

I'm using:

- Linux Mint 15 "Olivia" with Cinnamon 1.8.8
- Rainlendar 2.11.1

There are no problems with drag & drop in Windows 7.

Any ideas what causes the performance issues or is there a setting to speed it up?
