## multiple months on screen

EDIT: dont worry i left it for a while came back to it and then figured it out.

hi, ive been using rainlendar for ages now, and i have just recently updated to the latest version (2.0.2 b32, build jan 1 2007) and for the life of me i cannot figure out how to display multiple months at the same time.

i have browsed the forums, and i have read that you can display multiple canaders at once, but even once i have added the additional calanders, they do not seem to have seperate settings. when i change calander1 to -1, i then go to calander2 and its also -1.

i know there has to be something im missing, can anyone please help me.

Just out of curiosity, what was wrong with the old system as it seemed very straight forward? The new system seems very very counter intuitive.

if you go into options->skins and look at the available calendars for the default skin (shadow4) you will se a dual calendar entry. Add thatone and you will get two months displayed. if you want more I guess you have to make your own skin (or hack a little at an old one)
