## Google Calendar replacement

Posted by StathisA - 2013/07/27 15:37

---

Hello,

currently i'm using google to sync Rainlendar and my iphone's calendar effectively making my calendar editable and viewable from everywhere...

now i'm looking for a google replacement that can sync to rainlendar (primarily) and iphone (would be sweet) but i'm not sure where to look for that functionality...

thanks a lot!

You could try the calendar in Apple's iCloud. It works through CalDAV in Rainlendar and it should be natively supported by iPhone.
