
Import/Export/Copy current Rainlendar Settings?

Posted by Tan - 2013/08/13 04:19

I have just bought a laptop for business and would like to import/export/copy? all my current Rainlendar settings from this pc to it including new categories, colours etc.

How do I do this? I do not want to have to re-modify a new calendar setup to get it the same. Is there a queasy (quick & easy) way of taking all the settings from one Rainlendar and copying/exporting it into another?
