## Does not open on start up

Posted by Stuart - 2013/08/15 13:05

---

I am using windows 8 and my browser is Firefox. Rainlender2 is on my start menu but does not open when my computer is turned on.

When I go to the program and hit properties I get the message c:\user\owner\desktop\rainlendar2 is not a valid path and the folder may not exist.

I am able to open it but can't make it open on start up.

Any suggestions?

Have you enabled Options->"Enable on startup" in Rainlendar? If that does not work you can move the Rainlendar's shortcut to your Startup folder (<http://dottech.org/88876/windows-8-where-is-the-startup-folder-and-how-to-make-apps-or-processes-to-run-automatically-at-windows-boot/>).
