## Outlook error: failed to read \"Personal Folders\"

Posted by 2\_i - 2013/08/16 17:39

---

Hi, after installing Outlook 2013 (32-bit) under Win 8 (64-bit) and Rainlendar Pro 2.11.1 (32-bit), I get an 'Outlook error! Failed to read the Outlook items from "Personal Folders"'. The events are indeed not read from Outlook. The same combination of Outlook 2013 and Pro 2.11.1 works fine under Win 7 (64-bit). (I had problems in the latter combination with OLMAPI32.DLL path, but fixed them in the registry.) Any suggestions how to progress? Incidentally, the error message also advises to check the log file for more info, but the log file has 0 length and I cannot find an option for activating the log. Thanks.

---

OK, I solved the problem. When adding the Outlook calendar, I was getting an Outlook error of "Invalid profile name", although the name "Outlook" was perfectly valid as my only profile. After ticking Cancel, the profile was somehow appearing inside Rainlendar, but the "MessageStore" was an invalid "Personal Folders". Changing that storage manually in the calendar settings, to my regular account, removed the error I was trying to cope with and made the events appear. Hurray!

=====

## Re:Outlook error:no profile is visible in setup

---

Using 64 for windows 8 pro version. No profile shows after selecting Outlook and pressing next.

---

Is your Outlook also 64-bit? Do you get any errors when you try to create the Outlook calendar in Rainlendar. Can you run Rainlendar in the debug mode and send the debug log to me (use the support email address and include a link to this forum thread).

---

Yes, Outlook and Rainlendar are both 64. Using windows 8, also 64, after clicking add when it goes to profile, it is blank and I cannot recreate it. Thank you. Following is the log:

---

The acc't is MS exchange  
.

---

## Re:Outlook error:no profile is visible in setup

Posted by Rainy - 2013/09/22 10:04

---

The second row in the log says that Rainlendar is 32 bit. You also need to try to create the Outlook calendar in Rainlendar so that the log will contain information about it.

---

## Re:Outlook error:no profile is visible in setup

Orig. I downloaded 64 bit, but when downloading the pro, I downloaded the 32 bit. Just downloaded 64 and it works perfectly. Thanks for your excellent and prompt advice.
