## event not on top when I hover over

Posted by goodgrf - 2013/09/05 09:21

---

For some reason, when I hover over a date, the event is showing behind the calendar. That is new. I've gone through the forum and through the choices but haven't seen how to get that back on top. Thanks for your help.

This happens from time to time. It seems to be a bug in the operating system. It sometimes messes up the z-order of the layered windows. Restarting Rainlendar usually fixes the issue.
