
Category icons bug

Posted by darren1234 - 2013/09/06 12:39

when creating a new event and then setting the category, there is an image in the box where that category's icon should be. Any user defined icons are displayed over that image. Please see image.

anyone else have this problem?

The image behind the icon is the number of the current day and the default event image. The area for the category list is smaller than the days in the calendar which is probably the reason they get overlapped.
