
New event = crash

Posted by elastic - 2013/09/12 02:42

Using beta version b133, 64bit, win 7.

When creating a New Event from the Events box, Rainlendar crashes. This worked perfectly fine in the 2.11.1 version.
Dump file: <https://www.dropbox.com/s/zob3ck4b194giu1/Rainlendar2.DMP>

It also happens when I create a new event from an assigned hotkey:
http://www.rainlendar.net/cms/images/fbfiles/images/hotkey_rainlendar.jpg

I get almost the same error message when I'm trying to create a new event from the event list (right click on Events and click New Event)
