## Install Beta to cure disappearing event

Posted by Anjistar - 2013/09/14 02:14

---

I am having the same problem as in this thread.

I had Rainlendar Pro 2.10, and tried updating to 2.11 but that didn't solve the problem. So I found the thread and downloaded the latest beta version

How do I install it - there doesn't appear to be an installer with it? I found an .exe file but it says it can't install as there's no libcurl.dll file. But I can see the libcurl file a few items higher up the list.

1. Make a backup (File->Backup in Rainlendar's manager dialog)
  2. Download the latest beta version ([http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=showcat&catid=7](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=showcat&catid=7))
  3. Uncompress the contents of the zip over your current Rainlendar installation (C:\Program Files\Rainlendar2)
  4. Run Rainlendar2.exe

When you say 'over your current rainlendar installation' do you mean just extract it to the same folder and say 'yes to all' for replace?

Only I tried that and I think it installed - theres a b129 in the about window after the version number.

But the problem still exists - I try to add an event, it appears momentarily, then vanishes.

Yes. You need to replace the files in the folder. If the version number did not change it means that you are still running the old version of Rainlendar. At the moment the latest build is b133.

Well, I am still having problems.

I closed Rainlendar, downloaded the new version and tried to extract it to my Rainlendar folder.

The attached screenshot is what I got, 0 to 36 of 529 <http://www.rainlendar.net/cms/images/fbfiles/images/Screenshot->

So now what!

The tool that you are using to extract the contents of the zip does not seem to support Windows UAC correctly. You need to run it as administrator or extract the files first e.g. to your desktop and copy them from there to the Program Files folder.
