
a question about category icons

Posted by darren1234 - 2013/09/16 07:20

am trying to make a skin with two calendar views, a horizontal one and a grid one. I want different icons at different offsets for the same category in each calendar.
Is this possible?

Yes, it is possible. You need to create the category definitions separately for one of the calendars. For example you can check how this is done in the "Large Calendar" which is in the Shadow4 skin.
