## Get an error while connecting to a CalDav calendar

Posted by disco.stoo - 2013/09/16 14:42

---

I get an error while trying to connect to my CalDav calendar (See attached file).

The calendar works fine with other CalDav clients, it only doesn't work with rainlendar. I hope someone can help me with this problem.

Unfortunately the Synology's CalDAV server is not compatible with Rainlendar. It doesn't support any of the ways Rainlendar tries to use to read the events.

Thanks for the reply. Is it foreseeable that future versions of Rainlendar will support the synology caldav calendar? Or is there a work around to get it work?

I would need access to a Synology server so I could check how Mozilla Lightning reads the events from it. I tried their demo server but unfortunately it doesn't allow you to enable the CalDAV support.

Hello! I've changed to a Synology-Server (CalDav), too, which works pretty fine with lightning. Unfortunately i can't use Rainlendar any more.

Rainy, if you are still interested in making Rainlendar compatible with synology server, i could open a demo-account for you if this could help you.

Yes, I'm still interested. You can send the login details to the Rainlendar's support address. I can then check how Lightning accesses the data from the server and see if Rainlendar could do things the same way.

Hello, I am also using synology's caldav server and rainlendar for years now... If you did not received credentials to a demo account on a synology, I may provide you one... I hope you will be able to find a way using it, I bought a license thinking Caldav (as a standard) should work...

I did receive the credentials (thanks Marque) and got the issue fixed so Rainlendar should support Synology in the next build.

Great! I would like to see this kind of reactivity more often! Thank you...
