
Outlook problem

Posted by courtpl - 2006/11/01 05:26

Hello All ...

I have a little problem, i have set on the outlook properties the option "Import Alarms" to true.
But when an alarm appear on my desktop and i click on the dimiss button, the application freeze and use 50% of the processor.

Have-you an idee for correct this ???

I'm not able to reproduce this. Does it happen only with the Outlook events? Does the Snooze button work correctly?
