
Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/02 12:54

Build 134 can be downloaded from here:

Windows (32-bit): Rainlendar-2.12.b134-32bit.zip
Windows (64-bit): Rainlendar-2.12.b134-64bit.zip
Linux TAR (32-bit): Rainlendar-2.12.b134-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.12.b134-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.12.b134-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.12.b134-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.12.b134.dmg

MD5SUMS-b134

Translation file: rainlendar2.pot

This is beta version! It has not been tested.

Install instructions for Windows:

1. Make a backup (File->Backup in Rainlendar's manager dialog)
2. Download the zip file from above
3. Uncompress the contents of the zip over your current Rainlendar installation (C:\Program Files\Rainlendar2)
4. Run Rainlendar2.exe

Changes:

- o Added support for the element for the
- o Generic list's "multiline"-attribute was not accessible from lua script.
- o The manager and calendar showed incorrect end date to for tasks which did not define the time component.
- o Values for the variables were not parsed correctly on locales which used ',' instead '.' as decimal separator.
- o Improved the wrapping in the message box.
- o Google calendar (v3) can now read more than 2500 events from the server.
- o Added next and previous buttons to the Shadow4's Grid Calendar.
- o RegisterMenuItems() lua method can be used to add new items to Rainlendar's menu.
- o Alarm should not constantly pop in front of other windows anymore if it is not set as topmost.
- o Google calendar (v3) accesses the calendars by their id instead the name.
- o It's now possible to expand and collapse the subtasks in the todo list.
- o Refresh is done automatically after successful skin/addon installation.

Good JoB Rainy and anoob !!! the tooltip works!

in Today window "events" and "tasks" not translated

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/03 02:16

The texts should be "Events" and "To do" instead "EVENTS" and "TO DO" so that the texts are matched. I'll update the skin in the next release.

Re:Rainlendar 2.12 BETA build 134

Posted by eyebox - 2013/10/04 08:51

With this beta version my "TO DO" window is empty ("No tasks") although I have several tasks, each of them with sub-tasks. I noticed "Hide upcoming tasks" is checked by default, but unchecking it also did not help.

Posted by Rainy - 2013/10/04 10:07

@anoob, Can you attach (or send) an example? I tried this included tester skin and it at least is working...

@evanade, I fixed the language upload script so it should work now.

Re:Rainlendar 2.12 BETA build 134

Posted by anoob - 2013/10/04 15:44

Hmm, I test your file (tester skin) at a whole new b134, then I got the same result, also can not work and will crash.

Added : Ohh, I found if I use tester skin separately, it can work normal, but if I use it with other skin together, it will crash.

Added : OK, this issue seems is: can not use "Alarm" and/or "Tooltip" window.

=====

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/05 01:28

Ok, got it. The tooltip causes the crash because the empty item does not have one. I'll fix that.

=====

Re:Rainlendar 2.12 BETA build 134

Posted by anoob - 2013/10/05 12:13

Two bugs in "Manager" :

a) click the new Status-icon or Priority-icon will popup a menu, then click one item of menu can filter by the item; but at the moment this can only work in English language.

b) "Reset completed time" does not work correctly.
that is, if I click "Reset completed time", it does not done what it should do.

http://www.rainlendar.net/cms/images/fbfiles/images/2013_10_06_1.png

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/06 03:16

-
- a) True. It compares the English texts with the translated values. I'll fix that.
 - b) What did you expect it to do? It should clear the COMPLETED property from the task which is mainly used to determine the current instance of a recurring task (i.e. the recurring task would be moved back to the first instance).

=====

Re:Rainlendar 2.12 BETA build 134

Posted by anoob - 2013/10/06 03:31

b) Sorry, my mean is: the task still mark as "Completed", no change to "Ready", ex. the "Status" in "ToDo Dialog" is no change, the new Status-Icon no change.
Sorry, I put it mistaken as "Reset to ready", thanks.

Another question: can not be seen directly from Alarm-Icon to know if alarm has been dismissed.

=====

Re: Rainlendar 2.12 BETA build 134

Posted by marcelo.betel - 2013/10/06 14:57

The 32bit is working fine, but I can not open the Manager in 64bit...
...the program crashes rigt there.

Oh, anda I forgot to say that it STILL teakes more them 1 MINUTE to be ready to another change or even a simple window reposition after I hit "OK" to keep any change on any ToDo item... :(

Re: Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/07 11:04

@anoob, yes the icon could change depending on the dismissal state. I'll add it to my backlog.

@marcelo.betel, Windows or Linux version? I'm not able to reproduce this at least on my Windows and Ubuntu installations. Can you provide the crash information as explained in here:

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=3102

Try also disabling all your calendars to see if one of your events is causing the crash/slowdown.

Re:Rainlendar 2.12 BETA build 134

Posted by Lou - 2013/10/09 11:19

@Rainy it is possible to change the month with the command "Global_ShowMonth" can you do the same with the year? eg "Global_ShowYear"...

thank

=====

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/09 11:34

Do you want to select a specific year or just move forward/backward? You can use Global_ShowMonth(+12) to move to the next year.

Re:Rainlendar 2.12 BETA build 134

Posted by Lou - 2013/10/09 11:51

OK not test +12... thx
yes to create buttons +1 or -1 years !

otherwise the window Today is not set by default in Active skins! is normal?

=====

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/13 02:30

I have been thinking if the today window should be active by default or not but I guess it should. I'll change it.

=====

Re:Rainlendar 2.12 BETA build 134

Posted by Lou - 2013/10/13 05:39

OK is active by default!

otherwise error in "elements.xml" skin "Chromophore"

line 420:

the wrong bitmap in default & values !

the correct code:

Posted by Ticogrande - 2013/10/17 13:38

Hi

Just an FYI, for MAC version OSX 10.8.5, Options (Preferences), Advanced, Snooze Time setting cannot be updated nor changed.

=====

Re: Rainlendar 2.12 BETA build 134

Posted by Ticogrande - 2013/10/17 19:49

Just noticed the delimiters are different... old ver 2.11 was 120, (space) New ver beta is 120; (no space)

Maybe why not able to change?

=====

Re: Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/18 13:09

I think the separator has always been semicolon. I at least don't remember changing it. Comma is not a good separator since it is used as decimal separator in some locales.

Note that on Mac you might have to move the focus away from the edited control before the changes are actually applied.

=====

Re: Rainlendar 2.12 BETA build 134

Posted by Ticogrande - 2013/10/19 09:59

On all my calendars for a LONG time, it has been commas. Here is mine from 2.11.1 b129:

1, 5, 10, 30, 60, 120, 240, 360, 720, 1440, 2880, 5760, 0r, 1r, 10r, 60r

Comma then space.

On 2.12 BETA is is 1; 5; 10; 30; etc

I switched back as I needed the alarm options.

I am also, very sorry,... been a Mac user since 1984 but I have no idea what you mean by "you might have to move the focus away from the edited control before the changes are actually applied."

What is focus?

Tim

Re:Rainlendar 2.12 BETA build 134

Posted by UPieper - 2013/10/25 00:03

hi,

I'm getting this error message:

wxWidgets Debug Alert

..\..\src\common\datetime.cpp(1366): assert "IsValid()" failed in wxDateTime::GetTm(): invalid wxDateTime

Call stack:

mbtowc_l
RtlFreeHeap
wxAppConsoleBase::OnAssertFailure
free
wxString::wxString
wxOnAssert
wxDateTime::GetTm
unlock
tzset
wxDateTime::TimeZone::TimeZone
Rainlendar_GetAllCategories
0031F4B4
031DC240
Rainlendar_GetAllCategories
Rainlendar_GetAllCategories
Rainlendar_GetAllCategories
wxAppConsoleBase::HandleEvent
wxFSHandlerHash_wxImplementation_HashTable::DeleteNode
IsThreadDesktopComposited

Do you want to stop the program?

You can also choose to suppress further warnings.

Yes No Cancel

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/27 05:00

@Ticogrande, Ok, I found the reason for this. The change was made only for the Mac version. Previously (and still in other platforms) there was an editor for the snooze time values but it didn't work correctly in Mac so it was changed to a plain text edit. That's what caused the separator to change from comma to semicolon.

@eybex, have you verified that you don't have any include/exclude filters defined for the to do list window?

@UPieper, Usually the asserts are caused by invalid time on some event. When do you get the error?

=====

Re:Rainlendar 2.12 BETA build 134

Posted by eyebex - 2013/10/28 04:27

@eyebex, have you verified that you don't have any include/exclude filters defined for the to do list window? I don't even know how / where to define those filters :) Where should I check for them? Anyway, I was just upgrading from v2.11.1-Build129 (where everything was fine) to v2.12-Build134 (which made all tasks disappear).

=====

Re:Rainlendar 2.12 BETA build 134

Posted by Rainy - 2013/10/28 10:28

I don't remember doing any changes which would hide the tasks from the list. Can you run Rainlendar in the debug mode and send the debug log to me (use the support email address and include a link to this forum thread). If you have multiple calendars enabled please disable all the others so that the log will contain only the calendar which has the problem.
