
sync Rainlendar-Pro to Outlook calendar

Posted by Druppie - 2013/10/10 05:00

How to sync Rainlendar-Pro with the MS Outlook calendar (web based)?
Follow the Rainlendar help instructions I get an error message MAPI dictionary.
Is the problem Rainlendar or Outlook en how to fix?

You need to have the Outlook application installed to your computer. It's possible to access the ICS version of the Outlook calendars (you can use the Share feature in Outlook.com) with the Network shared calendar but that will only get a read-only feed of the events. Implementing full synchronization with the Microsoft's calendar is not possible at the moment since their API doesn't support recurring events.
