## Day on large calendar doesn't change color

Posted by the oob - 2013/10/11 23:45

---

Hi, if I add an event to a day in the future, but don't categorize it, the day on the calendar doesn't change color. Is there any setting to change this? The only way I've found is to set a visual category for Google Calendar, but if I do that then I can't have different colors for different categories.

This is using the large calendar, running the 64 bit version of Rainlendar

I normally would categorize all my events anyway, but if I add an event from Google Calendar on my phone there's no category option. Ideally I'd prefer to be able to apply a default category to any uncategorized events, so if there's a way to do that please divulge :)

You can set the Options->Advanced->"Visual category overwrite" to "Only uncategorized" so that the events which already have a category are not affected.
