
Backup doesn't work

Posted by ResidentEvil - 2013/10/14 07:50

Heya,

I had to get a new hard drive, did a backup of my rainlendar and am now trying to get all of my events on the new hard drive, but it doesn't work.

I tried it with the new version, then with an older one. I unzipped the backup and copied the files into the User\... folder. Nothing.

When I try to restore it lets me do it and even says it was successful, but (also after restarting the program) the calender still remains blank.

What else can I do? Is there a possibility that the backup is f***ed?

Thanks in advance <http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2-987442ab4a79fbaa9b09b79496f89be2.ini>
