
Forum Password

Posted by FlyingHorse - 2013/10/14 16:12

What characters are acceptable for the forum password. I want to update mine but it is being denied for an invalid letter.
:huh: Thanks.

I'm not too familiar with the forum software but I don't think there are any characters that you couldn't use in the password. What is the exact error message that you get?

The error message says:
Field contains forbidden letters

Thanks. Found the part of the code that validates the user input and you cannot use the following characters in the name or password (don't really know why...): "%;()&+-
