## Adding text to the 'comment' box using quickadd

Posted by AndyS01 - 2013/10/15 10:26

---

I set Rainlendar events using an external program, using the -a command line parameter, but I don't see a way to put certain text into the 'comment' area of the event. Here is my -a text:

```
"#timer @TWKS2 Timekeeper 10/26/2013 8:30 pm to 10:50 pm 3 games"
```

The event gets created, but the '3 games' is added to the event title: "Timer 3 games" instead of "Timer" for the title, and "3 games" in the comment block.

Is there a tutorial or help file that details the special lead-in characters and field names?

Currently it's not possible to add text to the description field with quickadd. The Rainlendar's help has a small section about the quickadd and there is a bit outdated wiki page too but I think that's all the help that is available.
