
Problem with Google synchronisation

Posted by salex50 - 2013/10/24 19:08

The problem is as follows:

I have common off-line calenda in .ics format, ccreated by Rainlendar2. In order to have similar calendar with Google I uploade it there.

For off-line calenda an event looks like:

10:00 - 11:00 Event text

When I add Google calendar to Railendar list, the same event lloks like:

10:00 - 11:00 Enent text

i.e. the word is added to every enent

Please advise on that problem

The text is shown if you have not installed the license for Rainlendar. You can purchase one from the "Purchase" link above. After purchase you will receive an email with a download link to the license file which you can the download and install. If you already own a license for the Pro version you can just download it again and reinstall it.
