
Google Taks not delete automatically

Posted by Kingsdom - 2013/10/28 09:35

Hi Rainlender Team,

First of all, nice Tool you developed :)

I have a small problem and i don't know where my missconfig is.
I added my Google Calender and Google Tasks to Rainlender.

I configured the Poll frequency to 15mins.

Now, when i delete a tasks with my smartphone or marked it as done and Raindlander sync the next time, the tool don't delete this entry.

When i update the tool manually with right click and Refresh, the entries disappear.

Do i forgot an option here?

Thanks in advance for support :)

I tried this but I'm not able to reproduce the problem. I don't use the mobile tasks but if I delete a task from Google's website and wait for Rainlendar to poll for changes from the server the deleted task is removed from the list. Can you run Rainlendar in the debug mode and send the debug log to me (use the support email address and include a link to this forum thread). Wait until the poll duration has passed and let me know which task should have been deleted from the list. If you have multiple calendars enabled please disable all the others so that the log will contain only the calendar which has the problem.
