
How to use Google Calendar

Posted by mdiesing - 2006/11/01 06:38

Hi there,

I tried to setup Rainlendar to show my google calendar. Do achieve this, I gave rainlendar my private calendar http-URL provided by google and added no further login/password details.

I don't get any error message from RL, but the items in my google calendar don't show up either in RL.

Could someone point my into the right direction how to set up the google link correctly?

Thanks in advance,

Markus

What does the log say? (It's in C:\Documents and Settings\\.rainlendar2).

In short: it says that I was too blind to find it out myself :)

13:19:14: OnlineKalender: Downloading: [http://www.google.com/calendar/embed?src=<username>](http://www.google.com/calendar/embed?src=<username>8.9521e-314mail.com&pvttk=da9fdf725ud7648d8ba4931e9ce2066a)

8.9521e-314mail.com&pvttk=da9fdf725ud7648d8ba4931e9ce2066a

13:19:16: OnlineKalender: Result: (0) 200 OK.

13:19:16: WARNING: OnlineKalender: Unable to parse the file. Are you sure it's a iCalendar file?

I used the HTTP-Link instead of the iCal Link 'cause Rainlendar said that you can add http/https/ftp URLs. So purely my fault! Sorry.

Btw, great product of yours! Got the link from a freind of mine and started translating/correcting the german version yesterday. Thanks for the great work!

Markus

correcting the german translation... Please let me know when you have done that, since I did the bulk of it and would gladly speak about better phrasings for some stuff :)

Oh, I uploaded it yesterday night. Feel free to have a look at it. It's available on the site I guess - otherwise I can also send it over.

Cheers
