## Sync configuration of multiple Installations

Posted by tuxflo - 2013/10/30 05:07

---

Hey!  
Is there a way to sync or copy the Rainlendar configuration between multiple installations of Rainlendar?

I configured a lot of stuff (5 calendars, with day and week view, in and excluded calendars at some views...) at my Desktop Computer and now I want to use the same configuration on my mobile netbook.

I'm using the Pro version with a valid license on Linux(Ubuntu) Systems.

Greetings,  
tuxflo

You can copy the rainlendar2.ini file from the settings folder ([http://www.rainlendar.net/cms/index.php?option=com\\_easyfaq&Itemid=26#faq1](http://www.rainlendar.net/cms/index.php?option=com_easyfaq&Itemid=26#faq1)) to another computer to transfer the settings. Note that if you are using absolute paths e.g. in the calendar file location they naturally do not work unless the folder structure is exactly the same in all computers.
