
Red Hat Linux Edition 6 Installation Issue

Posted by holyone2 - 2013/10/30 10:27

I'm using 64-bit RHEL-6, when I extract the tar.bz2, and run ./rainlendar2 I get:

```
./rainlendar2: error while loading shared libraries: librtmp.so.0: cannot open shared object file: No such file or directory
```

Please could someone help me with this issue?

Regards,

Ben

You are missing a library that is required by Rainlendar. I don't use Redhat myself so I don't know the exact package you need to install but you can search for the librtmp from your package manager.
