
In Manager: calc/statistic, like total hours spent

Posted by al_is_on - 2013/11/04 06:14

Hi!

How about some statistics in "Manager" ?

- I select some entries (several days / tasks) and rainlendar informs total hours spent in those SELECTED days, average hours/day, number of days, etc:

good idea!

Personally, I am for a "Statistics" tab in the Manager, with the number of "events" or "tasks"... and/or by calendar, date...

Certainly possible but I'm not sure what the use case for this is. The number of events/tasks might be useful to know but what do you do with the total duration of the selected events (or did I understand this correctly)? Also the recurring events could give infinite results...

It would be useful to calculate the cost (in hours => then in \$\$) of any kind of task/project. For instance project X, which took 4 month, divided into several and separated days, took actually only 1 full month of work.

In case of a recurrent task, then you already have something to 'plan'. So maybe it could calculate only the time spent until the actual day.

:)
