## make windows \"on top\"

---

In an earlier post, I was shown how to bring up the calendar by double clicking the systray entry. This works, but the calendar and task windows do not come to the front. Is there any script or other method to force focus on the calendar window that I am calling up when I double click the systray icon. When they come up, I want them (calendar and todo list) in the foreground.

NEVER MIND, ANSWERED MY OWN QUESTION... now I know what "Desktop" means for the General-Position option. I set that to Normal and it works as I want. Geez, this program is so flexible!
