## Rainlendar 2.12 BETA build 135

Posted by Rainy - 2013/11/17 10:14

---

Build 135 can be downloaded from here:

Windows (32-bit): Rainlendar-2.12.b135-32bit.zip  
Windows (64-bit): Rainlendar-2.12.b135-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.12.b135-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.12.b135-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.12.b135-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.12.b135-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.12.b135.dmg

MD5SUMS-b135

Translation file: rainlendar2.pot

This is beta version! It has not been tested.

Install instructions for Windows:

1. Make a backup (File->Backup in Rainlendar's manager dialog)
2. Download the zip file from above
3. Uncompress the contents of the zip over your current Rainlendar installation (C:\Program Files\Rainlendar2)
4. Run Rainlendar2.exe

Changes:

- o The status and priority filters in the manager did not work in other languages.
- o The time is now written to the template too (but only if it is changed before the template is saved).
- o The drawing order of the skin items can be defined with "zorder".
- o The opacity of the background in Shadow4 can be changed from the settings.
- o It's possible to disable the alarm sound for a individual event.
- o The calendar can be defined with the quickadd by enclosing the name in ": e.g. "Summary "
- o Added skin info caching for r2skin files which makes the options dialog open faster.
- o The today window is activated by default if the skin is selected in the simple mode.
- o The font face for the windows can be overridden in Options->Advanced->Font face
- o Fixes to the CalDAV support to make it compatible with Synology server.
- o Moving tasks as the first item in Google Tasks did not work.

---

- o It's possible to disable the alarm sound for a individual event.

does not work! even if you choose "No sound" ?

---

---

## Re:Rainlendar 2.12 BETA build 135

Posted by Jorge\_Luis - 2013/11/17 19:11

---

Update es-ES.

In the "select alarm", I think there's no need to show the default sound's path. With the Preview button is enough...

---

Lou wrote:

No, I disagree with you, it is good to see the address!

It could be, but I can't find anything useful reading "resources\alarm.wav" in the screen. It isn't the full path, you can't change this path (at least, now), and why to look for the default alarm.wav file to replace it if we have the "custom sound" option...

Rainy wrote:

o The time is now written to the template too (but only if it is changed before the template is saved).

I just have a problem with time. I've added a task, selecting the due date but forgot to change the time (it reads 14:30 as default). Then, I try to change it (writing) to 10:15. OK. Look in the calendar, but it still reads 14:30. But..., if I select a time from the dropdown list, it changes. Unfortunately, in this case it doesn't work for me as 10:15 isn't in the list. Of course, creating a new task with my time works fine.

The time written in the template should work only for created templates.

does not work! even if you choose "No sound" ?

The "No sound" seems to revert back to default alarm after refresh. The iCalendar parser probably skips the empty field. I'll check that.

It could be, but I can't find anything useful reading "resources\alarm.wav" in the screen. It isn't the full path, you can't change this path (at least, now), and why to look for the default alarm.wav file to replace it if we have the "custom sound" option...

True. The relative name doesn't give much information and if the user has changed the default alarm he should know what it now is...

The time written in the template should work only for created templates.

Yes, it should. I'll fix that.

In several last builds I have a problem with Remember the Milk no due time tasks (I believe it is happening since b133). E.g. if I add task with due date set to 23.11.2013 via RTM web interface, Rainlendar indicates it as the due date has been set to 22.11. 0:00. Therefore these tasks are reminded one day sooner than they should be! When I start Rainlendar I am constantly reminded with tasks that have due date set for tomorrow.

The attached screenshot should make it more clear.

RTM seems to keep also the dates in UTC format so the day depends on your timezone. I'll change this in Rainlendar so that it converts the dates to the local time.

---

Somewhere there is an invalid time (probably in one of the events or tasks). What do you do when the assert is shown?

=====

## Re:Rainlendar 2.12 BETA build 135

Posted by Lou - 2013/12/04 10:58

---

Once a week... I "Cancel" and after "Refresh" ! are ok

for me the problem must come from the google calendar that must be corrupted during download or this Rainlendar who has difficulty...

Calendars "Setting" and "Suppress errors" idem On or Off !

=====

## Re:Rainlendar 2.12 BETA build 135

Posted by Rainy - 2013/12/06 02:05

---

The asserts are shown in the beta versions always so it's not possible to turn them off. It's quite difficult to try to track down the assert related to the invalid times since you would have to find the event which is causing the problem. One way would be to move the events to a different calendar which is not synched with Rainlendar until the error does not happen anymore. This works only if the error happens always though.

Anyway, the asserts usually are not critical errors. In the main releases they are disabled so you won't see them.

## Re:Rainlendar 2.12 BETA build 135

Posted by Lou - 2013/12/06 15:36

---

ok thank you for the explanation !

you can put a simple check dates in calendars... (eg: days 1-31)  
& Rainlendar ask us what to do if an error're finding (manual correction or download again ...)

Yesterday I found that Rainlendar's synchronization with Google Calendar doesn't work. Updated to the latest version. It looks like the Calendar works, but if I try to add a task, I can't, because no calendar I can choose.

The screenshot is attached.

From b130, the Google Tasks had moved to a separate plugin.  
So you need re-create it again from Options->Calendars->"Google Task".

## Re:Rainlendar 2.12 BETA build 135

Posted by cellist.phil - 2013/12/24 10:11

---

Just "for the record". I imagine these have already been reported here, but I have just recently installed the beta and probably have missed reading them in the long thread.

1. New events do not get added to the google calendar. Manual refresh seems to pick the new one up.
2. Sometimes I get error message UNABLE TO DOWNLOAD (6)0 UNABLE TO UPLOAD EVENT (0) 404 UNABLE TO DELETE (0) 404, but usually no error message even though the operation has (new, etc.) has been carried out.

Is there a way to increase the internal refresh rate as a temporary workaround?

Phil

Referring to 20135 post regarding .rainlendar directory:

I backed up what I thought was "everything" before installing the beta on both computers where I run Rainlendar; I did not know about the .rainlendar directory so I did not back it up. Does the .rainlendar directory impact specifically the google problem and if so how should I proceed since I don't have the previous content of that directory?

---

## Re:Rainlendar 2.12 BETA build 135

Posted by Rainy - 2013/12/27 06:09

---

The 404 error means that the event doesn't exist in the server. This can happen e.g. if you first delete the event from the server and then try to do the same from Rainlendar. Using an old offline copy can also cause the 404 error. In that case it is advised to reset the offline copy by disabling it first and enabling it after a refresh.

The .rainlendar2 folder contains all the settings and locally stored events. The problem with the Google Calendar is related how Rainlendar handles the response from the Googles server so the settings do not any impact on that. If you suspect that there is some incompatibility problem with the old settings you can create a portable setup from the latest beta version.

---

## Re:Rainlendar 2.12 BETA build 135

Posted by cellist.phil - 2013/12/27 10:57

---

## 404 Error

I'm not using an "old offline copy". So I must have accidentally deleted the event from google calendar, if that is the only other known cause of the 404.

### The problem with the Google Calendar

For me the Google Calendar problem manifested itself by all new events not showing up on the other computer's rainlendar display. (We run rainlendar on two computers.) So far, after installing b135, that problem appears to be fixed.

### Latest Version?

Just to be certain that I'm running the latest version, ABOUT shows:

Version 2.12 (b135) 32 bit Build on Nov 17 2013.

### Plugins

CalDAV Calendar v1.1 (b135)  
Comma Separated Values v1.2 (b135)  
Google Calendar (v3) v1.0 (b135)  
Google Calendar v1.11 (b135)  
Google Tasks v1.0 (b135)  
iCalendar Format v1.10 (b135)  
Rainlendar Ini Format v1.3 (b135)  
Network Shared Calendar v1.10 (b135)  
Microsoft Outlook v1.11 (b135)  
Remember The Milk v1.5 (b135)  
Toodledo v1.1 (b135)

I'm still getting the 404 error, see attached. I get the error when I dismiss an alarm notification. After the error, the event

---

has been deleted from both the google calendar and the rainlendar calendar.I'm certain that I did not manually delete the event from either the google calendar or the rainlendar calendar. After the message, the event had been deleted from both the google calendar and the rainlendar calendar.

I'm running 135. Is this something that has been addressed in 136?

The error message has two separate errors from different calendars? Have you configured the same calendar twice in Rainlendar? You should not do that. It will most likely cause all kinds of weird error situations when Rainlendar tries to update the same event multiple times to Google calendar.

=====

## Re:Rainlendar 2.12 BETA build 135

Posted by Flamefire - 2014/01/04 05:53

---

The issue with the calendar not loading from the saved location before getting any network still persists...

---

Refer to message 20386

The error message has two separate errors from different calendars? Have you configured the same calendar twice in Rainlendar?

:blush: I had made a copy of the google calendar to provide an easy way to get back to its settings in the event something went wrong. I had initially disabled it but apparently I accidentally enabled later. I did not notice the 2 different names in the error message.

=====
