
Using East-Central Europe characters in Rainlendar

Posted by DreadMore - 2013/11/20 04:30

Hello, recently i found out that I have a problem with inputing the letter " " (its in Polish alphabet) to the task and event window's additional information box.

As most special QWERTY keyboard characters from non-English countries, this character is entered by pressing "Right Alt" and some character. For " " the formula is (in Polish programmer keyboard):

"Right Alt" + a =

For some reason, the additional info box (the biggest box in event or task window) has its keyboard shortcut for "select all" reassigned from "Left Alt" + "a" to "Right Alt" + "a".

This overwrites the " " keyboard shortcut, making writing some things look strange (have to use "a" instead, looks silly in our language). Sometimes I even forget about the error and after writing a long note, I accidently erese all the data inside the box while trying to write a word with " " (you know, alt + a, then any key to replace selected text? :()

Suprisingly enough, the event/task title and location boxes are not affected by this problem, only the big info box.

Is there some way to treat this problem, or will I have to hope and wait for a new update patching it?

Best regards
Max Marshal

This should be already fixed in the recent beta versions.
