## Shifted Dates

Posted by corgano - 2013/11/25 01:49

---

Hi!

Maybe its not a bug and I made something wrong. I had the setup a new system. I exported the events on the old system an imported them on the new one. It seems that some dates are shifted by one day. I'm not quite sure what went wrong, but it seems to be the case with "repeating events" which have a reminder.

Thank you for your help!

What format you were using when you exported the events? Did the calendar define any "Time offset" in its options? Are the events "all day" or do they have time component too?

Hi Rainy,

I was using Rainlendar 2.8. (0.1?). - I had to use the ICalendar format (as far as I remember). I haven't seen any "Time offset" options and the shifted dates were marked as "all day" events. I already delete the old files, so I can't reproduce this "maybe-bug". I'm sorry, that I'm not much of a help.

Best regards,  
corgano
