## what are the symptoms of the problem with google?

Posted by cellist.phil - 2013/12/21 10:58

---

I'm having problems with events defined on one computer not being displayed on the other computer. Is this likely something that would be fixed by installing the beta release? If I install the beta release, will I lose events that are currently defined?

TIA, Phil

See e.g. [this thread](#) what kind of error message you will get.

Upgrading to beta does not affect your settings or events.
