## use existing configuration with the beta version?

Posted by cellist.phil - 2013/12/21 19:34

---

I installed the beta in a different folder than my current production version. How can I use my existing calendars, skins, and other configuration with the beta version?

The beta will use the same settings and events as the stable version by default (unless you are using portable installation in which case you need to either overwrite the old installation or transfer the settings and events manually).
