
Rainlendar not showing some google calendar events

Posted by darren1234 - 2013/12/29 02:59

In google calendar I have 'my calendar' and all events are showing on my rainlendar calendar, I also have 'UK holidays' checked on my google calendar, most of these show up on my rainlendar calendar but today I thought I'd check on my rainlendar calendar to see what day the easter holidays are. To my surprise they are not there, so I checked on my google calendar and they are all there, Good Friday and Easter Sunday.

Please fix ASAP.

I know these are not 'nice' repeat events but surely if they are on my google calendar they should show up on rainlendar.

Are you using the Google's UK holidays calendar? I tried it with the latest Rainlendar build and everything seems to work just fine. Try upgrading to the latest beta version if you can't get the calendar to work.

Have done as requested the problem has not been resolved. Please see image. this is with UK Holidays on, as you can see there is no entry for the 20th.

Can you run Rainlendar in the debug mode and send the debug log to me (use the support email address and include a link to this forum thread). Please disable all your other calendars so that the log contains only the UK Holidays. I can check from the log what exactly the server sends to Rainlendar.

How do I start rainlendar in debug mode? And I can't seem to find a support address.

Start the application from the "Debug Rainlendar" link as explained in the link I posted above. The support address can be found by clicking the "Contact" link at the top of this page.
