## Show all windows

Posted by Superheated - 2007/01/30 09:37

---

Hi, I'm running rainlendar2 on xp but I've made the mistake of hiding the taskbar icon, and then hiding all of the windows. So now I can't even select rainlendar to use keyboard shortcuts (alt+1, 2, 3 etc)

Any ideas about how I can get my calendar back? :)

I've tried reinstalling the program but that didn't help.. is there a file somewhere that stores all of the preferences?

The Rainlendar settings are stored in the file rainlendar.ini. You can find it in:  
C:\Documents and Settings\USERNAME\.rainlendar2\

Go to the and change the value for ShowTrayIcon to 1 (it should be 0 now). Then restart Rainlendar.
