## Can't sort tasks

Posted by Fyr - 2014/01/04 21:58

---

I successfully updated Rainlendar 2.12 BETA build 135 with the latest Rainlendar 2.12 build 136.

When I'm trying to sort tasks, it returns: "Unable to upload the task: XXX. Server returned: (0) 400 Bad Request". It happened before the update.

Can you run Rainlendar in the debug mode and send the debug log to me (use the support email address and include a link to this forum thread). If you have multiple calendars enabled please disable all the others so that the log will contain only the calendar which has the problem.

I use two calendars and their tasks; I don't know which one contains the error.

---

The two different task lists is causing the problem. The task after which Rainlendar tries to move the other task comes from the different task list and this creates the error. I'll need to change the task ordering so that it tries to find the previous task from the same calendar. Might get a quite complex though...

I see the error only this time, I haven't seen it before. The program's architecture has been changed?

Succeeded in task sorting, I don't know why, but now it works.
