
Widget Addon

Posted by Lou - 2014/01/05 06:40

I want to make an Addon to skin Shadow4!

how? I think we have created a zip file: "*.r2skin-addon"
I use what file inside ?

regards

what file inside?

Create *.r2skin-addon file is almost same with that create *.r2skin file, there only a few different, eg:

a) Add a no extension text file - "skin", its content is skin's name and version. (before b131, version number must fully same)

For example: if you want to add into your newest skin ChromophoreLou, then the content is ChromophoreLou
1.4.25

b) Rename file skin.xml to widget-addon.xml, and change the content to

c) Rename file 'xml/elements.xml' to 'xml/widget-elements.xml'.

Note: if not do b) c), will (can) overwrite the old one.

You can download following file to see, it can add/overwrite weather window into shadow4.

<http://www.rainlendar.net/cms/images/fbfiles/files/backtomsnforShadow4.zip>
