## Can't add events window

Posted by Aula28 - 2014/01/07 10:21

---

Hi!

I've recently reinstalled Rainlendar (new computer) but now I can't get the Events Window up (or the Task Window, if I wanted to). If I right click and choose 'windows', I only get the following options:

Calendar;

Settings (has the submenu of 'calendar');

Show all windows (greyed out);

Hide all windows.

From what I remember, I should be able to choose both the 'Events' and 'Task/To Do' windows from here, right?

Can someone help me, please? Thank you in advance! :)

You have removed the list windows from your active skin or you are using a skin which doesn't have the windows at all. Go to Options->Skins and add the list windows back to the active skin (you need to be in the advanced mode) or choose another skin.
